PROFESSIONAL SUMMARY

Software Engineering undergraduate at Universiti Kebangsaan Malaysia with hands-on experience developing Android and web applications using Kotlin, Java, PHP, JavaScript, Firebase, SQL, and REST APIs. Passionate about mobile and software development, with strong problem-solving skills and a desire to contribute to innovative software solutions while gaining industry experience.

EDUCATION

Universiti Kebangsaan Malaysia, Bangi, Selangor

Bachelor of Software Engineering with Honours

- GPA 3.49
- MUET: BAND 4
- Expected Graduate: 31 August 2027

LEADERSHIP

Exco Committee Member – Bual Bicara: Memperkasa Diri Melalui Komunikasi Efektif (2024)

Assisted in coordinating program activities and collaborating with committee members during event execution.

Project Treasurer - CyberTalk: Etika Siber (2024)

Managed program-related financial tasks and supported event organization and communication

Exco Committee Member - Bengkel Siber (2024)

Worked with the organizing team to support cybersecurity workshop activities and coordination.

ACADEMIC PROJECTS

UKMate

A study planning app that helps students track progress and stay consistent with their studies.

- Developed an Android application to help university students manage study schedules and monitor learning progress and implemented Pomodoro timer, study session tracking, gamification, and analytics dashboard.
- Integrated Firebase Authentication and Firestore for secure user management and cloud data storage.
- Applied MVVM architecture to improve maintainability and scalability.
- Technologies: Kotlin, Jetpack Compose, Firebase Authentication, Firebase Firestore, MVVM, Android Studio

PlantiVerse – Planting @ UKM Botanical Garden

VR-based interactive planting game that lets players identify seeds, complete planting challenges, and learn about plants in a virtual UKM Botanical Garden environment

- Developed an interactive VR planting game based on the UKM Botanical Garden using Unity and C#.
- Implemented interactive seed selection, planting validation, hint system, plant identification and score display.
- Technologies: Unity 6, C#, XR Interaction Toolkit, Visual Studio 2022

WatanFreelanceSystem

A platform that helps UKM students find freelance jobs within the university

- Developed a web-based freelance platform for UKM students and designed user interface and workflow for job posting and task management.
- Implemented database structure using MySQL.
- Collaborated using software engineering methodologies throughout development.
- Technologies: PHP, HTML5, CSS3, JavaScript, MySQL, XAMPP

TECHNICAL SKILLS

- Mobile Application Development
- Web Application Development
- Virtual Reality (VR)
- REST API Integration
- Firebase Authentication & Firestore
- Database Design & Management
- UI/UX Design
- Software Testing

PROGRAMMING LANGUAGE

- Python
- Kotlin
- Java
- PHP
- JavaScript
- SQL
- HTML/CSS
- Git Version Control

SOFT SKILLS

- Problem Solving
- Teamwork & Collaboration
- Communication
- Time Management
- Adaptability
- Critical Thinking
- Fast Learner
